

Technical Data Sheet

QSi 217

Transparent, Liquid Silicone Rubber

PRODUCT DESCRIPTION

QSi 217 is a two-part, clear, liquid silicone that will cure at room temperature or at elevated temperatures. It has a low viscosity, which allows for ease of flow around complex parts, providing electrical insulation and shock resistance. The chemical composition provides hydrolytic and reversion resistance.

KEY FEATURES

- Convenient 1:1 mixing ratio for use in automatic dispensing equipment or hand mixing
- Contains no solvents
- Non-yellowing catalyst system

TYPICAL PROPERTIES

UNCATALYZED		
TEST	QSi 217 A	QSi 217 B
Color	Clear	Clear
Viscosity	360 cps	300 cps
Specific Gravity	0.97	0.97

CATALYZED	
MIX RATIO 1:1 by weight	
Color	Clear, colorless
Consistency	Easily pourable
Gel time at 25°C *	20 minutes

* Gel time is defined as the time required for the material to become a solid or a semi-solid.

CURED PROPERTIES	
60 minutes at 100°C/212°F	
PROPERTY	RESULT
Durometer, Shore A	35
Linear shrinkage	< 0.1 %
Refractive index	1.406

Technical Data Sheet

ELECTRICAL PROPERTIES	
Dielectric strength	480 V/mil
Dielectric constant @ 1000 Hz	3.00
Dissipation factor @ 1000 Hz	0.002
Volume resistivity	1.0×10^{15} ohm-cm

THERMAL PROPERTIES	
Useful temperature range	- 55°C – 204°C
Thermal conductivity	0.18 W/m-K
Coefficient of thermal expansion, cm/cm, °C	28.0×10^{-5}
Specific heat	0.3 cal/g-C

MIXING

QSi 217 A is catalyzed with QSi 217 B at a 1:1 ratio by weight. In order to achieve optimum performance the same lot number of QSi 217 A and QSi 217 B should be used.

Combine one part of QSi 217 A with one part of QSi 217 B by weight into a clean, compatible container. The volume of the container should be 3-4 times the volume of the material to be mixed. Mix by hand or with mixing equipment until a homogeneous mixture is obtained. Accurate weighing of all components, on a suitable scale, is essential for optimal product performance when mixing by hand.

DE-AERATION

Air trapped during mixing should be removed by vacuum at 29 inches of mercury. During the process the material will expand and intermittent evacuation may be required. Typically after releasing the vacuum 2 - 3 times the mass will collapse on itself at which time the vacuum should be left on for an additional 2 - 4 minutes.

Machine mixed material does not normally need to be de-aired.

STORAGE AND SHELF LIFE

If QSi 217 A and QSi 217 B are stored in their original unopened containers, in an environment that does not exceed 38°C (100°F) then QSi will warranty the material for a period of 12 months from the date of shipment.
