Section 12 ECOLOGICAL INFORMATION

Ecotoxicity: This product in contact with water polymerizes and it is not possible to measure aquatic toxicity in fish, daphnia or algae..

Persistence and Degradability: Tests in aqueous or humid media with ethyl-2cyanoacrylate with the intent to determine effective concentrations cannot be performed due to technical reasons based on the chemical properties of the monomer. In the presence of moisture, ethyl-2-cyanoacrylate polymerizes within seconds (inherent property of ethyl-2-cyanoacrylate based instant glues.) Thus very low determined monomer concentrations in water represent a non-steady state situation from which a defined concentration can not be derived. Not Determined.

Bioaccumulative Potential: Tests in aqueous or humid media with ethyl-2cyanoacrylate with the intent to determine effective concentrations cannot be performed due to technical reasons based on the chemical properties of the monomer. In the presence of moisture, ethyl-2-cyanoacrylate polymerizes within seconds (inherent property of ethyl-2-cyanoacrylate based instant glues.) Thus very low determined monomer concentrations in water represent a non-steady state situation from which a defined concentration can not be derived. Not Determined.

Mobility in Soil: Study is technically non-feasible. Test substance will polymerize with contact to soil or water immediately. Not Determined.

Other Adverse Effects: No known significant effects or critical hazards.

Section 13 DISPOSAL CONSIDERATIONS

Disposal Methods:

The generation of waste should be avoided or minimized wherever possible. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste

disposal legislation and any regional local authority requirements. Dispose of surplus and non-recycle-able products via a licensed waste disposal contractor. Waste should not be disposed of untreated to the sewer unless fully compliant with the requirements of all authorities with jurisdiction. Waste packaging should be recycled. Incineration or landfill should only be considered when recycling is not feasible. This material and its container must be disposed of in a safe way. Care should be taken when handling emptied containers or liners may retain some product residues. Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.
